

KEY FEATURES

Large, bright, high-resolution screen makes instrument control easy

Optimized for Trimble Access field software

Fully-integrated camera, GPS navigation, and communications

Improved collaboration and control through constant connectivity

The Trimble® TSC3 controller with Trimble Access™ software is a groundbreaking handheld field computing solution that streamlines the flow of everyday surveying work and the number of devices you need in the field.

A POWERFUL ENGINE FOR DRIVING TRIMBLE ACCESS SOFTWARE

The latest in a trusted line of field controllers, the Trimble TSC3 controller is rugged and designed for surveyor's workflows. It performs Trimble Access operations fast and delivers ample power to run third-party applications on the Windows® platform.

MAKE PICTURES AN ESSENTIAL PART OF YOUR WORKFLOW

With an inbuilt 5 MP Autofocus camera and LED flash, you can take digital photographs of your job site right from the controller. No extra devices, batteries, or file transfers are required, and images are automatically geotagged for easy identification.

Easily record the qualitative information that survey data alone can miss, such as site conditions or work progress. The benefits of including images as part of your workflow are almost limitless: from easy data handover to in-field quality assurance.

COMMUNICATIONS THAT BRIDGE FIELD AND OFFICE IN REAL TIME

The TSC3 controller enables wireless Internet connectivity through an integrated GSM/GPRS modem. This allows Trimble Access software to facilitate a constant flow of information between field and office, including real-time synchronization of field and office data with Trimble AccessSync software. You can download and upload important files any time and from anywhere, as needed. Data collection, processing, analysis, and delivery are faster and more efficient.

A wealth of communication options let you transfer critical information no matter the environment: Connect with VRS™ connections using the internal modem. Access your office network through 802.11 LAN, or USB and serial RS232 communication options.

FOR ALL OF YOUR SURVEYING APPLICATIONS

The rugged TSC3 controller is purpose-built to make both Integrated Surveying and Spatial Imaging jobs easier, more efficient, and more flexible:

- **Easy-to-Use Interface:** Control your survey and verify your work on the large, bright, high-resolution LCD touchscreen. With the option of a QWERTY or conventional alphanumeric keyboard, data entry is quick and easy.
- **An Internal Compass:** Receive direction cues even when you are stationary or moving backwards.
- **Integrated GPS:** Employ GPS Search on a conventional survey without an external GPS receiver. You can also navigate and find control points and other assets quickly.
- **Cables Eliminated:** Bluetooth® wireless technology eliminates cables in surveying systems. An internal 2.4 GHz radio option is also ideal for controlling Trimble robotic systems.

A fully-integrated controller with a bright, daylight readable display will make your field work more efficient.
